

## Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

Read more about Early Journal Content at <http://about.jstor.org/participate-jstor/individuals/early-journal-content>.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact [support@jstor.org](mailto:support@jstor.org).

# AGRICULTURAL ECONOMICS

By **EDWIN G. NOURSE**

*Professor of Economics in Iowa State College*

*xxvi+896 pages, 8vo, cloth; \$4.00, postpaid \$4.25*

"It is an easy and pleasant task to praise such a volume as that of Professor Nourse. The author is right in calling it a sort of 'composite textbook.' The authorities selected speak for the trustworthiness of the material, and the astonishing variety of data presented guarantee balance and completeness. What, however, impresses me most is, first, the perspective given the student in the crisp introductory lines to each group of topics, and secondly, the admirable way in which theory and rural aspects in particular have been bound into one unified whole. The interrelation of all social activities is too often forgotten in slicing off rural economics from the economic system as a whole."—*O. Fred Boucke, Pennsylvania State College.*

## Companion Volume

### OUTLINES OF AGRICULTURAL ECONOMICS

*106 pages, paper; 75 cents, postpaid 79 cents*

The author's experience both in teaching agricultural economics and in using the particular material contained in the volume of *Readings* described above is embodied in these *Outlines*. Besides questions and exercises it embraces additional syllabus and bibliographical material, suggestions for term reports, and other arrangements of the material for courses in particular subjects or for a different method of presentation. A manual for the teacher as well as for the student.

# Evolution, Genetics, and Eugenics

By **HORATIO H. NEWMAN**

*Professor of Zoölogy  
The University of Chicago*

Most thinking people today are more or less interested in evolution and eugenics. You want to speak authoritatively on these subjects. This volume by Professor Newman will be found of unusual significance as it is written in an easy reading style and contains excerpts from such well-known writers as Darwin, Wallace, Romanes, DeVries, LeConte, Weismann, Morgan, Castle, Lull, Guyer, Popenoe, Johnson, Babcock, Clausen, Walter, Saleeby, Shull, Tayler, Downing, and Thomson.

This book has been prepared to meet a specific demand for an account of the various phases of evolutionary biology condensed within the scope of one volume of moderate size.

*The value of the book is enhanced by a wise use of illustrations.*

*550 pages. \$3.75, postpaid \$3.90*

# The Anatomy of Woody Plants

(With 306 figures and illustrations)

By E. C. JEFFREY

Professor of Plant Morphology in Harvard University

x+478 pages, cloth; \$4.75, postpaid \$4.95

This book aims to describe, analyze, and discuss the anatomical structure of the most important families of plants. It does for the anatomy of plants what so many textbooks have done for the human anatomy. The book will be of great service, not only to botanical instruction everywhere, but also to paleobotany. The following table of contents will indicate the scope of the volume:

- |                                                                    |                                                            |
|--------------------------------------------------------------------|------------------------------------------------------------|
| I. The Cell                                                        | XVII. The Canons of Comparative Anatomy                    |
| II. The Tissue Systems                                             | XVIII. The Lycopsidea and Pteropsida                       |
| III. The Fibrovascular Tissues: Wood—General                       | XIX. The Lycopodiales                                      |
| IV. The Fibrovascular Tissues: Secondary Wood—Tracheids and Fibers | XX. The Equisetales (including Sphenophyllales)            |
| V. The Fibrovascular Tissues: Secondary Wood—Parenchyma            | XXI. The Filicales                                         |
| VI. The Fibrovascular Tissues: Secondary Wood—Rays                 | XXII. The Archigymnospermae: Cycadofilicales and Cycadales |
| VII. The Fibrovascular Tissues: Secondary Wood—Vessels             | XXIII. The Archigymnospermae: Cordaitales and Ginkgoales   |
| VIII. The Fibrovascular Tissues: Phloem                            | XXIV. The Metagymnospermae: Coniferales                    |
| IX. The Epidermis                                                  | XXV. The Metagymnospermae: Gnetales                        |
| X. The Fundamental Tissues                                         | XXVI. The Angiosperms                                      |
| XI. Definitions of the Organs                                      | XXVII. The Woody Dicotyledons                              |
| XII. The Root                                                      | XXVIII. The Herbaceous Dicotyledons                        |
| XIII. The Stem                                                     | XXIX. The Monocotyledons                                   |
| XIV. The Leaf                                                      | XXX. Anatomical Structure and Climatic Evolution           |
| XV. The Microsporangium                                            | XXXI. Evolutionary Principles Exhibited by the Compositae  |
| XVI. The Megasporangium and Seed                                   | XXXII. Anatomical Technique                                |

## RECOMMENDATIONS

"This work should prove useful alike to the paleontologist, the morphologist, and the general student, and should promote the study of plant anatomy in our higher institutions, where the subject has suffered from the lack of a work presenting the subject from a modern point of view."—*Botanical Gazette*.

"Full of important observations and deductions."—*The American Journal of Science*.

"The book is of special interest for the large number of photo-micrographs used as illustrations. Such examples carry conviction where a mere drawing would not."—*The American Botanist*.

"An original and stimulating contribution to botanical literature."—*The Nation*.

# Plant Genetics

By JOHN M. COULTER

Head of the Department of Botany in the University of Chicago

and MERLE C. COULTER

Instructor in Plant Genetics in the University of Chicago

This book has been written to meet an increasing need among botanical students. Such students in these days, in whatever phase of botany they may be specializing, find it necessary to read with understanding much of the literature of plant genetics, because it is becoming increasingly significant in all botanical problems. This means that teachers and investigators must be able to command the literature of plant genetics, much of which has been so complex as to be a closed book for the uninitiated. *Plant Genetics* is an attempt to open this subject to botanical students and serves as an easy introduction to the subject.

*x + 214 pages, 12mo, cloth; \$1.50,

## Artificial Parthenogenesis and Fertilization

By JACQUES LOEB

Member of the Rockefeller Institute for  
Medical Research

This book gives, as the author says in the Preface, an account of the various methods by which unfertilized eggs can be caused to develop by physico-chemical means, and the conclusions which can be drawn from them concerning the mechanism by which the spermatozoön induces development. Since the problem of fertilization is intimately connected with so many different problems of physiology and pathology, the bearing of facts recorded and discussed in the book goes beyond the special problem indicated by the title.

## The Rôle of Diffusion and Osmotic Pressure in Plants

By BURTON EDWARD LIVINGSTON

This book would serve as a manual for both beginning and advanced students, as the first part is a thorough and concise treatise on osmotic phenomena in organic life; while the second part is a more discursive and equally thorough discussion of the present status of knowledge in regard to the occurrence of these phenomena, together with a bibliography on the subject.
